Alternative Payment Methods

A detailed handbook

An introduction

Welcome to Payyo's handbook for alternative payment methods.

Here, you will find a comprehensive guide to payment methods beyond traditional credit cards.

We explain the advantages of using alternative payment methods for your business and provide detailed insights into the diverse range of options Payyo offers.

At Payyo, we're dedicated to continually broadening our selection of APM's (Alternative Payment Methods) to meet the evolving needs of our clients.

Why use alternative payment methods?

Did you know that approximately 6% of customers end an online transaction because their preferred payment method is not available? This percentage can vary depending on the context and the target audience, but studies consistently show that offering a variety of payment options can reduce cart abandonment rates.

When only credit cards are offered, the abandonment rate can be higher because not all customers prefer or trust using them, especially in regions where alternative payment methods (like digital wallets, bank transfers, or Buy Now Pay Later options) are more popular or accessible.

As a payment partner for platforms, SaaS and marketplaces in the travel and leisure industry, we know how important an online payment flow of high quality and the resulting conversion for a merchant is. Conversion means the ratio when a website visitor turns into a customer, in our case, in successfully completing a payment.

There are different factors related to higher conversion rates. Looking at the mere checkout process, there are a lot of technical aspects that drive or decrease conversion. But also the number of available payment methods is an important asset for a merchant's turnover. Accessing new markets with additional local payment methods in the checkout is possible. To help their clients grow, Payyo considered this topic and solved the problem of an insufficient conversion rate by adding relevant payment methods for merchants and their customers.

Payyo has a large portfolio of alternative payment methods that are already used by some of our customers through our HPP (Hosted Payment Page).

Why use alternative payment methods?

While credit cards remain the most common payment method, Payyo is seeing a rise in the use of alternative payment methods. Adding APMs (Alternative Payment Methods) to your payment options can help boost conversion rates.

2023

2024

Which alternative payment method is beneficial for my business?

Whether merchants are looking to achieve successful geographical expansion or improve the conversion in their domestic markets, alternative payments during the checkout process can play a key role.

Payment method fragmentation varies strongly by geography, while credit card brands have become internationally available, others have remained confined to a single country, or even a single segment of the population in that country. Therefore, identifying their target audience is an important first step at the moment to decide which payment options offer to your clients.

For instance, if you're targeting the Swiss market, enabling TWINT is essential, while for the Netherlands, iDEAL is the preferred payment method. In 2024, two popular APMs, Sofort and Giropay, were discontinued in Europe, which led to a shift toward other payment methods such as Klarna, Google Pay, and Apple Pay.

The complete Payyo Alternative Payment Methods Handbook

For more information click on the payment method, you would like to know more about

Payment Method	Type	Country	Currency
iDeal	Bank transfer	Netherlands	EUR
Alipay	eWallet	China	EUR, CHF

PostFinance	eWallet	Switzerland	CHF

iDEAL is the leading payment system in the Netherlands that allows customers to complete transactions online using their bank of choice.

Ideal is the preferred payment option in the Netherlands with a market share of 59% of online transactions processed by Ideal.

Which banks allow customers to pay through iDEAL?

ABN AMRO, ASN Bank, bunq, ING, Knab, N26, Nationale-Nederlanden N.V., Rabobank, RegioBank, Revolut, SNS, Triodos Bank, Van Lanschot, Yoursafe B.V.

Important to know:

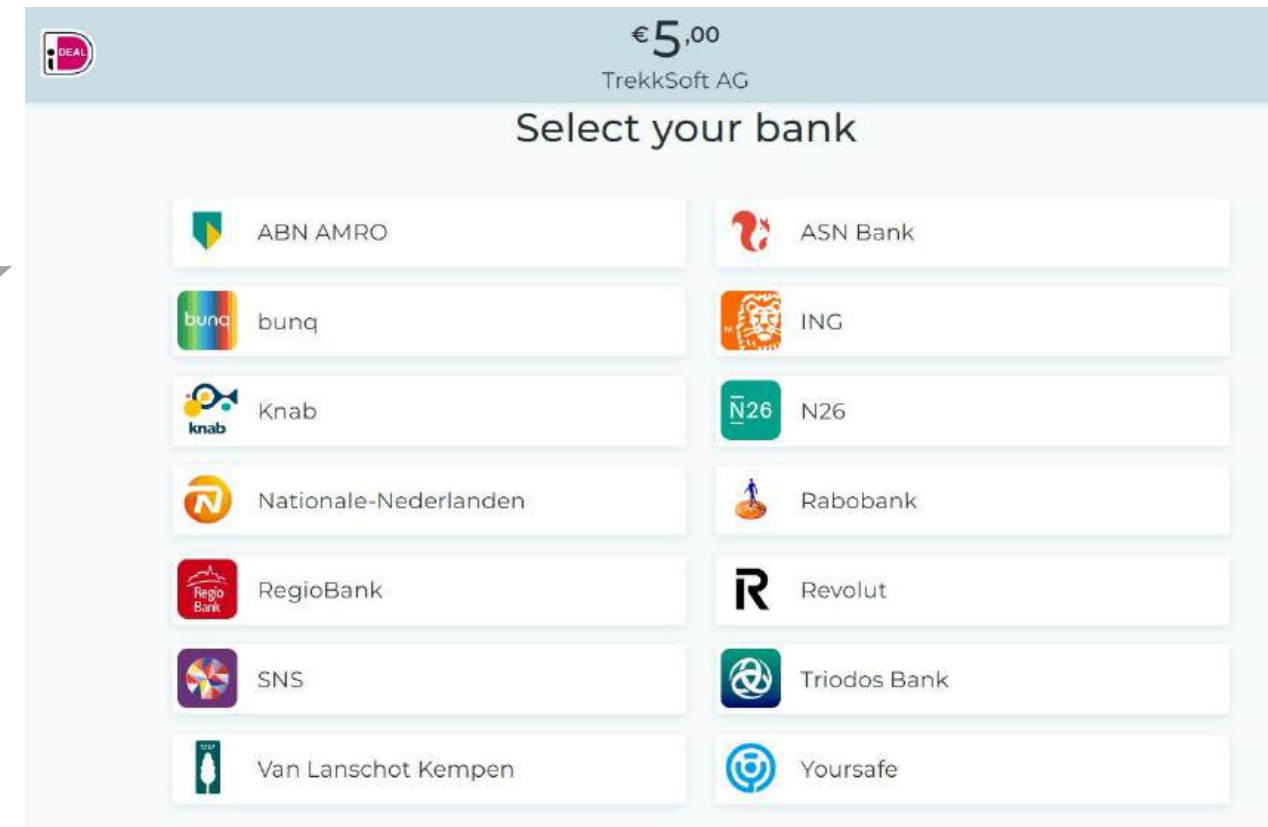

- Ideal is NOT COMPATIBLE WITH IFRAMES / POP UPS and needs to allow redirection for payment completion
- In the HPP solution, the webpages of some banks will break out of the iFRAME and the payment process will not be available.

Payment Flow (on our HPP)

1.
Customer selects the products and/or services on the merchant’s website and navigates to checkout.

2.
Customer selects iDEAL payment method on the merchant’s payment page or on Payyo’s hosted payment page.

3.
Customers are redirected to the acquirer payment page and select their bank.

4.
The Customer is redirected to their bank.

5.
Customer logs into the account and confirms the payment.

6.
iDEAL authorized the payment in real time.

7.
Customer is redirected to a successful payment page.

The above flow is generic, there might be some changes depending on the bank chosen

Alipay is a digital e-wallet which also includes a mobile app that allows customers to store credit cards, debit cards, and bank services so they can pay easily.

This payment method is one of the most important in China.

With over one billion users, Alipay handles more than half of China's payments and transformed a cash market into a card-trust-ing market with their eWallet.

Payment Flow (on our HPP)

- 1.** Customer selects the products and/or services on the merchant's website and navigates through the checkout page.
- 2.** Customer selects Alipay in merchants checkout or in Payyo's Hosted Payment Page when he is redirected.
- 3.** Customer pays in our HPP and is redirected to the acquired payment page .
- 4.** Customer is on a desktop device and scans the QR code on the payment page with his mobile or logs into his Alipay account. Customer is presented with transaction in local currency (exchange performed by Alipay).
- 5.** Customer enters the payment details and confirms the payment. Then is redirected to a successful payment on Alipay Page.
- 6.** Customer is redirected to Payyo's successful payment page.

TWINT is a digital Swiss wallet.

The customer can store their bank account in the mobile app their credit and debit card.

With this app, customers can purchase online, quickly and conveniently using their smartphone.

Note: Only “Pay Now” option is available in Payyo

Payment Flow (on our HPP)

1. Customer selects the products and/or services on the merchant’s website and navigates through the checkout page.

2. Customer selects TWINT payment method on the merchant’s checkout or once he gets redirected to Payyo’s hosted payment page.

3. Customer pays in our HPP and is redirected to the acquired payment page.

4. Payment page displays a QR code that the customer needs to scan or select “code” tab and enter the numeric code with the TWINT app installed on his mobile device.

5. Customer confirms the payment in the mobile app and gets redirected to a successful payment in the app as well as on the desktop, he gets redirected to Payyo successful payment page.

SEPA Direct Debit is suitable for merchants that regularly collect amounts in Euros and want to offer their customers a simple and convenient alternative payment.

This payment option is an easy way to take bank payments from customers, using an IBAN (International Bank Account Number).

SEPA Direct Debit is a reusable, delayed notification payment method. This means that it can take up to 14 business days to receive notification on the success or failure of a payment after you initiate a debit from the customer's account, though the average is five business days.

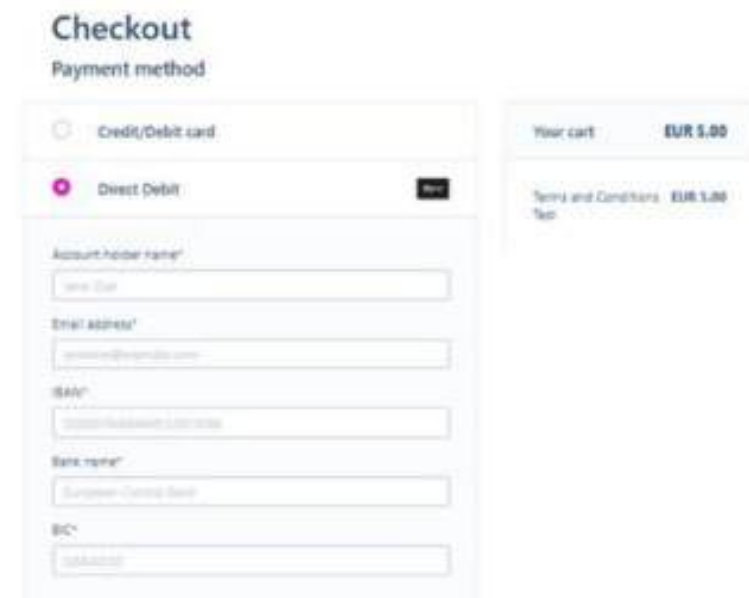

Payment Flow (on our HPP)

1. Customer selects the products and/or services on the merchant's website and navigates through the checkout page.

2. Customer selects the SEPA Direct Debit payment method on the merchant's checkout or once he gets redirected to Payyo's hosted payment page.

3. Customer chooses the payment method in Payyo HPP and fills up the information requested.

4. The customer gets redirected to the bank payment page to finish the purchase.

Apple Pay is a mobile payment and digital wallet service by Apple Inc. that allows users to make payments in person, in iOS apps, and on the web. It is supported on the iPhone, Apple Watch, iPad, and Mac.

People appreciate using Apple Pay to make purchases quickly and easily. You can enhance the purchase experience in your app or website by creating a streamlined checkout process and presenting a customized payment sheet that lets people promptly authorize payments and complete their transactions.

Payment Flow (on our HPP)

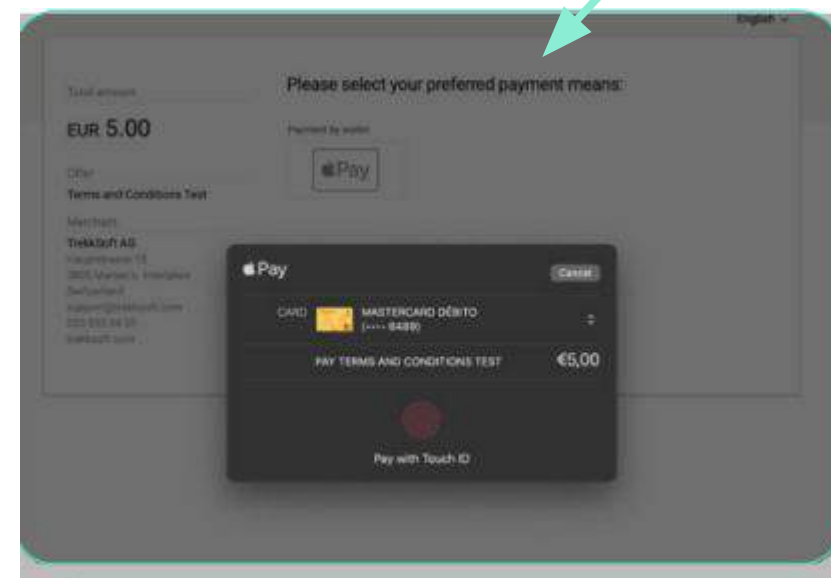

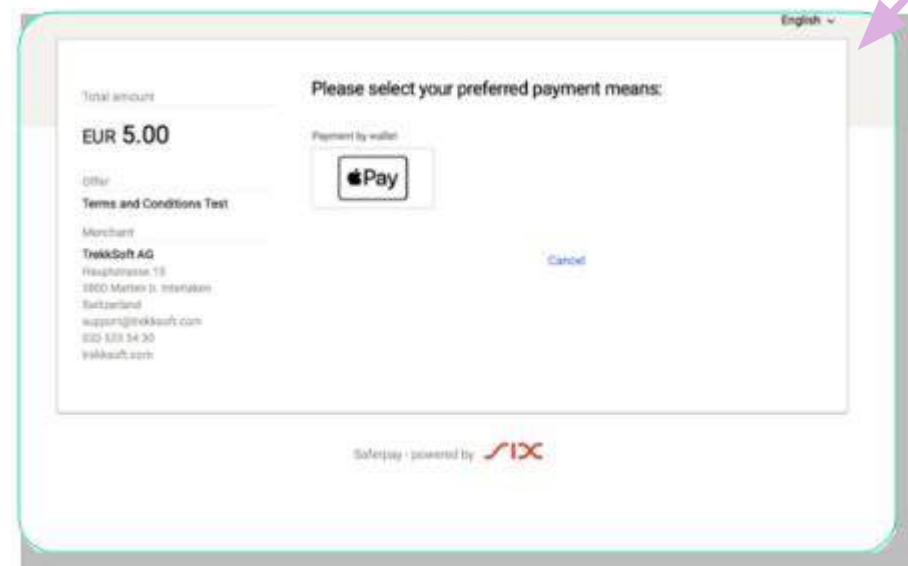

1. Customer selects the products and/or services on the merchant's website and navigates through the checkout page.

2. Customer selects the Apple Pay payment method on the merchant's checkout or once he gets redirected to Payyo's hosted payment page.

3. The customer is redirected to the acquirer payment page, and select Apple Pay.

4. Customer selects Apple Pay and the ewallet pops up in order to finish the payment. Apple Pay asks for a second step authentication of the customer, whether they need to scan the finger or insert a verification code that is sent by message to the customer number.

5. The customer finishes the payment and is redirected to the successful Payyo Payment Page.

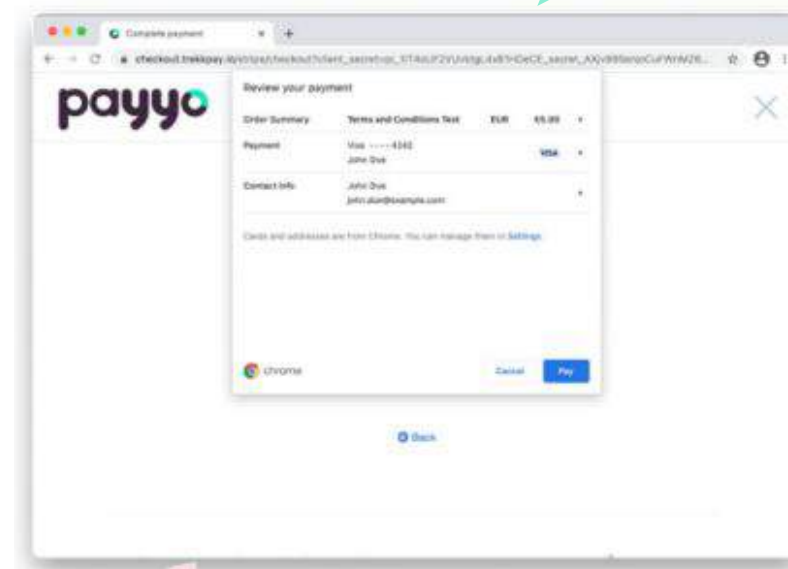

Google Pay is a mobile payment system that acts as a virtual wallet, allowing users to make payments and transfer money straight from their phones. The service is free for users and can store credit, debit, gift, and loyalty card information.

To make a purchase, a customer taps their mobile device on a point-of-sale terminal or chooses to pay in your mobile app. Google Pay responds with the customer's tokenized card and a cryptogram which acts as a one-time-use password.

Payment Flow (on our HPP)

- 1.** Customer selects the products and/or services on the merchant's website and navigates through the checkout page.
- 2.** Customer selects the Google Pay payment method on the merchant's checkout or once he gets redirected to Payyo's hosted payment page.
- 3.** The customer is redirected to the Google Pay payment page and selects Google Pay to proceed with the payment process.
- 4.** The customer is asked to finish the payment process, reviewing and finishing the payment.
- 5.** The customer finishes the payment and is redirected to the successful Payyo Payment Page.

EPS (Electronic Payment Standard) is an online transfer system developed by Austrian Banks and the Government. It provides a simple and secure process of online payments to millions of users in Austria.

Customers can complete transactions online using their bank credentials. EPS is supported by all Austrian banks and is accepted by over 80% of online retailers.

Payment Flow (on our HPP)

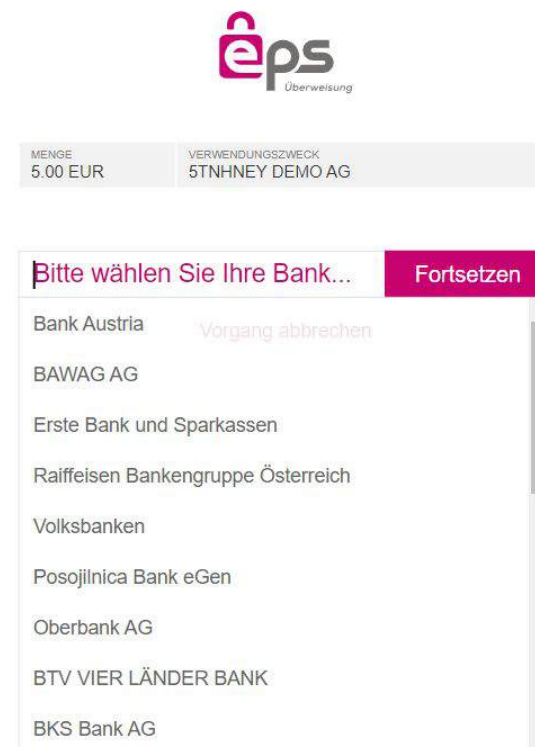

1. Customer selects the products and/or services on the merchant's website and navigates through the checkout page.

2. The customer selects EPS in our HPP and gets redirected to the EPS payment page where they need to select the bank or add the information requested such as BLZ or BIC.

3. Customer is redirected to their bank, where they input their login credentials.

4. The customer completes the payment. This step can be different depending on the bank details requested but normally they will need to log in with their bank account or complete the authorization process with a scanner or SMS.

5. The customer is redirected to Payyo successful payment page.

Swissbilling is a particularly flexible payment option that customers from Switzerland are using to pay with. At the moment of the payment, customers pay by an invoice that is created during the checkout process.

How does it work?

After the customer decides to pay with SwissBilling, they will receive an invoice (via email or post mail) for the payment and they will have a maximum of a month to pay the bill. Alternatively, the customers can also decide to pay in installments during the checkout. In this case, their invoice will come with the appropriate number of payment slips.

Some advantages of this payment method are: No bank data transfer, generous deadline, easy return, very easy payment flow, good conversion rate.

Payment Flow (on our HPP)

1. Customer selects the products and/or services on the merchant's website and navigates through the checkout page.

2. The customer selects to pay with "Pay by invoice" in our HPP and needs to fill in valid address information from Switzerland and his email address. After that, he selects to pay in our HPP.

3. Customer is redirected to the Swissbilling payment page, where they will need to confirm the address, agree with the terms of conditions and choose if they want to receive the invoice by email or by postal shipping (second picture attached).

4. Customers will get redirected to SwissBilling confirmation (depending if the user chose to receive a confirmation by email or post) and then they will get redirected to the successful payment page.

Klarna is a global payment method that gives customers a range of payment options during checkout. These payment options make it convenient for customers to purchase items in all price ranges.

At the moment, this payment method is offered to customers from Australia, Austria, Belgium, Canada, Czechia, Denmark, Finland, France, Greece, Germany, Ireland, Italy, Netherlands, New Zealand, Norway, Poland, Portugal, Romania, Spain, Sweden, Switzerland, United Kingdom, and the United States.

Payment Flow (on our HPP)

- 1.** Customer selects the products and/or services on the merchant's website and navigates through the checkout page.
- 2.** The customer selects to pay with "Klarna" in our HPP and needs to fill in a valid email address and chooses the country. After that he selects to pay in the Payyo HPP.
- 3.** Customer is redirected to Klarna. If he does not have a Klarna account he needs to confirm his number, email address, date of birth, name and address. If the account is already created this step will be skipped.
- 4.** Depending on the customer's country different payment options can be presented.
- 5.** The customer is redirected to Payyo successful payment page.
